Requirements for the WiFi Checklist		
Category	**Project**	**Request for Explanation**
Technical Requirements for Wireless AP Deployment	Layout Guidelines	Suitability and sufficiency are the guiding principles (considering cost, and the potential for mutual interference among a large number of access points).
	Channel Planning	Adjacent AP channel numbers are staggered (1, 6, 11) to prevent overlapping interference within the channel bandwidth.
	AP Installation Angle	AP installation with a tilt of 7°–9°
	AP Installation Location	Coverage range: 15 meters Installation height: approximately 3 meters.
	Wall Attenuation	Minimize signal loss through walls by accounting for physical barriers such as walls.
Performance Requirements	Network Protocol	IEEE 802.11b/g/nb
	Operating Frequency	2.4GHz/5GHz
	Signal Strength	>-65dB
	Real-time bandwidth	>5Mbps
	Network Delay	<100ms
	Packet Loss Rate	<4%
	Roaming Handover Time	Switching time > 0.7s
